

Abstract: Human Computer Interaction

Human Computer Interaction is the study of the interaction between users and computers. It is a field of study that is influenced by several other fields of study like Computer Science, Behavioral Science, Cognitive Psychology, Linguistics, Sociology etc. In this presentation we will cover the basic concepts of HCI along with its applications and advantages.

Brief Bio: Dr. Madhushri Banerjee

Dr. Madhushri Banerjee is an Assistant Professor of Information Technology at GGC. She has completed Bachelors and Masters in Computer Science from University of Calcutta, India. She subsequently did a Masters in Internet Software Systems from University of Birmingham, UK and thereafter completed her doctoral studies in Privacy Preserving Data Mining (PPDM) from University of Maryland Baltimore County. Her research interests include Data Mining, Statistical Data Analysis, Medical Data Mining, Internet Technology and Human Computer Interaction. She has successfully published her work in premium journals like Data and Knowledge Engineering and top conferences like CIKM.
